Wallet Prototype

Today I started sketches for how to put together my prototype of the wallet, breaking down each element and it's relative sizing.

14-09-23

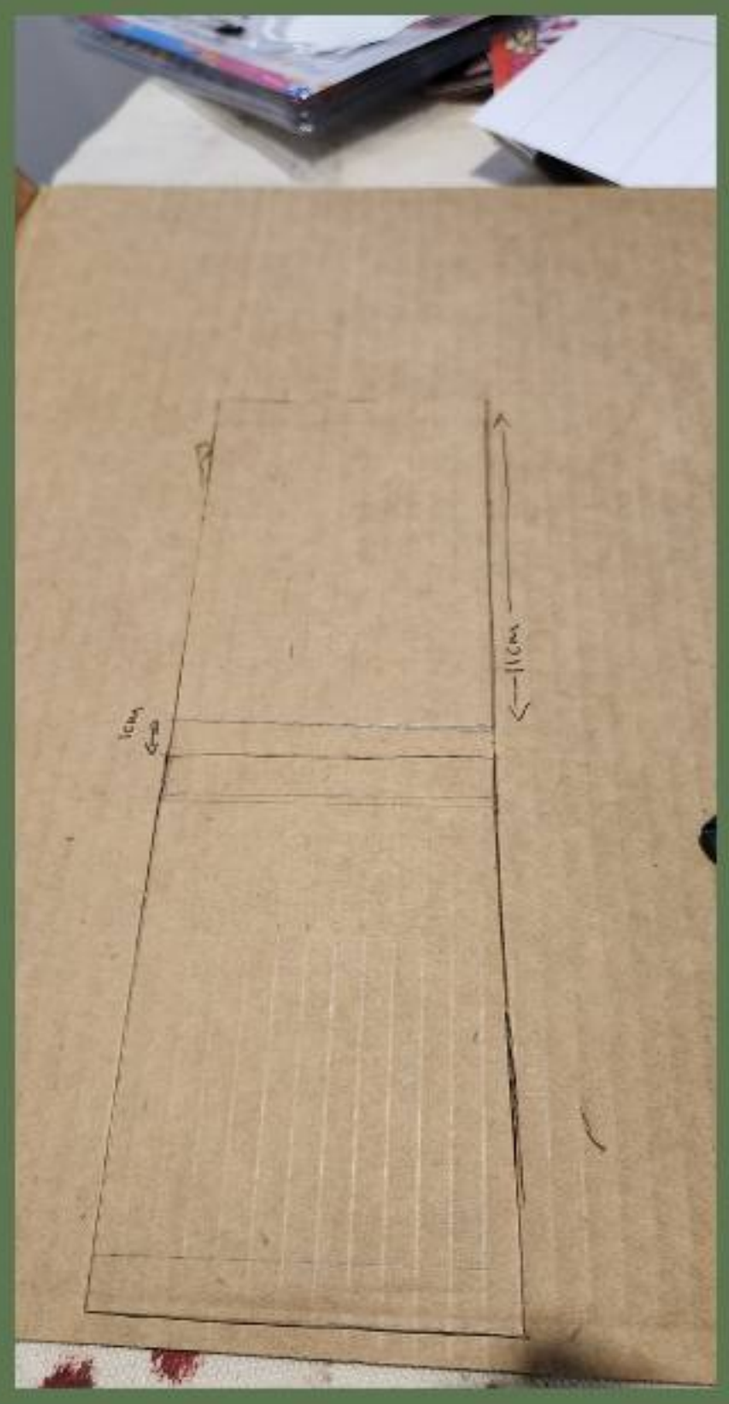

Today I began a digital model of my design, using fusion, which I will take the money clip and zipper element from to 3D and use in my prototype
My reasoning for the 3D model is to late use to create a short process animation, or storyboard, of how the wallet functions.

20-09-23

Wallet Prototype

Today i started work on a physical prototype, from card and cardboard, which my next steps are to add in the 3D printed money clip, and zipper.

23-09-23

I was concussed from 25/09-30/09

Wallet Prototype

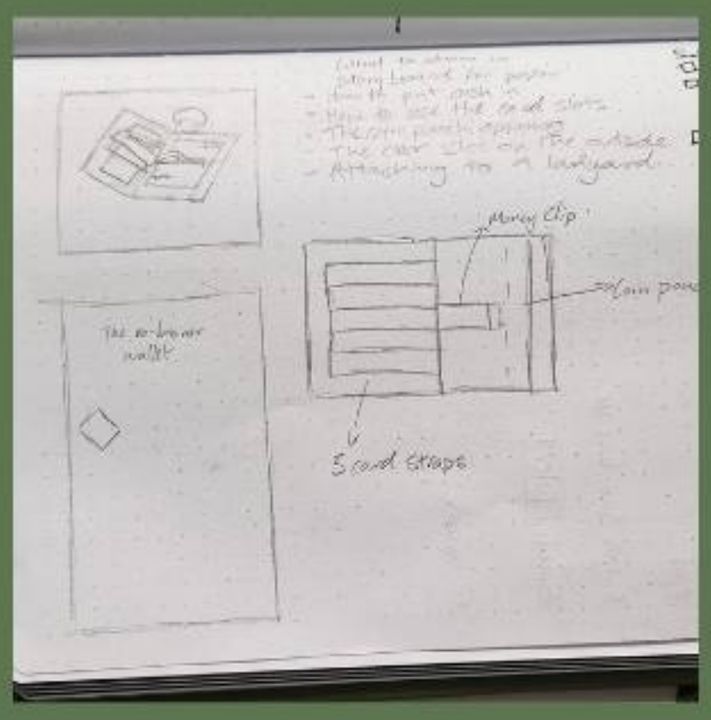

Today I worked to start planning my storyboard I will feature on the poster, as the design is quite complex and difficult for someone to understand from just looking at the design.

This means including these elements:

- How to put cash in the money clip
- How to use the velcro card slot
- How to unzip the coin pouch
- How the clear card slot on the back works
- The Keychain attachment working with lanyards.

02-10-23

After attending tutorial and recieving feedback I decided to stagger the card slots to make them more visable, and revisit the coin pouch in the design, potentially making it transparent so that the user can see the coins they have in there, and creating a velcro opening for it aswell, so that the user may have to use less force than a zipper.

I also 3D printed my money clip.

04-10-23

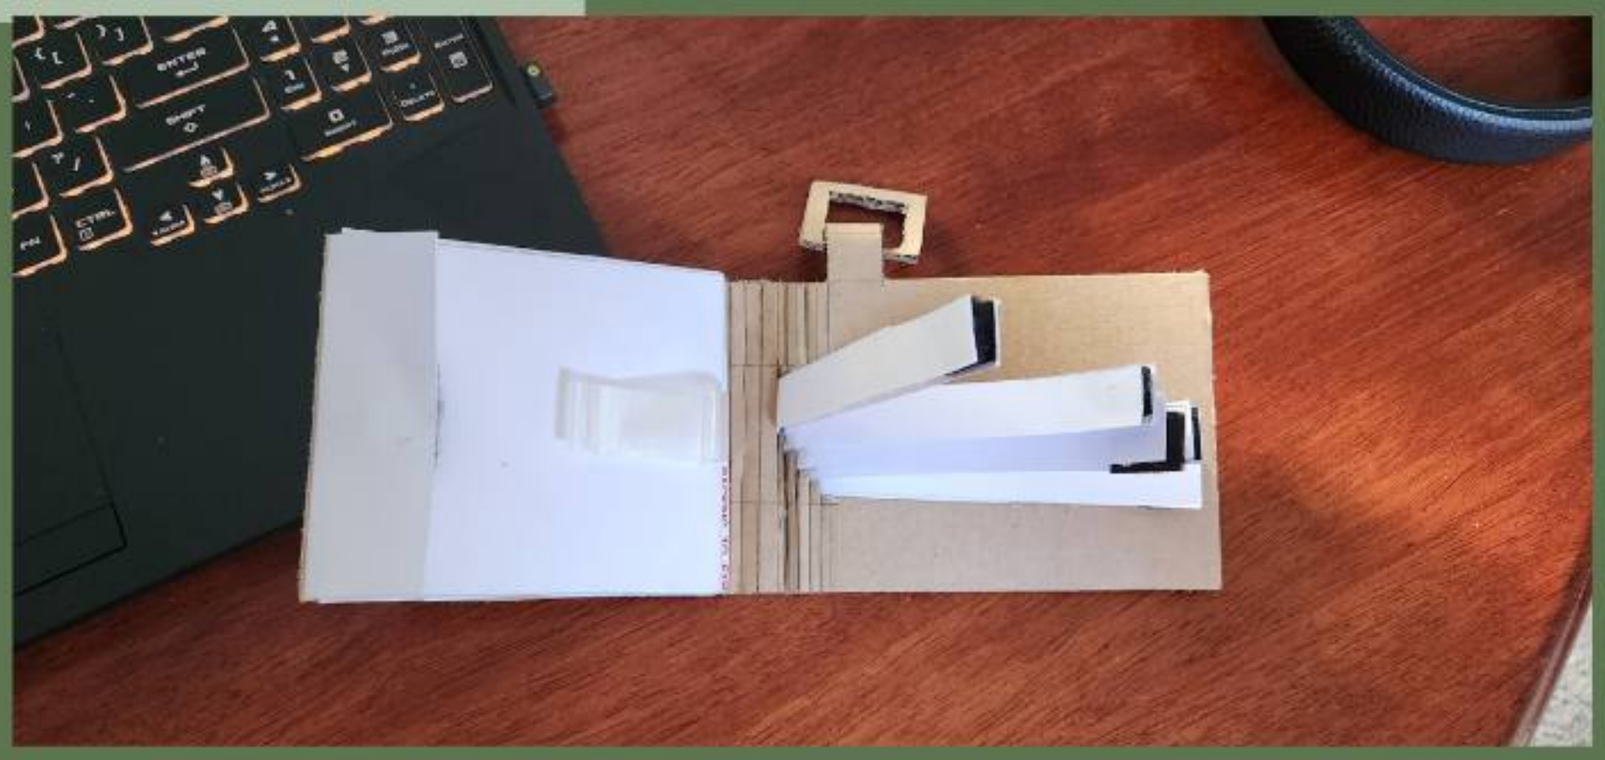

Wallet Prototype

Today I made a physical cardboard prototype of my updated design, adding in the 3D printed money clip, as well as adapting the card strips, and coin pouch, so that the strips are staggered making the cards more visable, and the coin pouch open without a zipper, instead using velcro.

I then also worked on a 3D render of my wallet I'll use for the poster.

In the render I want to feature everyway the wallet is used and interacted with, how the pockets open, what can be put where, and the overall design, as at a glance the design could be quite confusing to someone who doesn't know what all the different parts function as.

05-10-23

Wallet Prototype

I finished up my physical prototype by adding in the velcro parts to the card straps, and coin pouch.

I then worked on my digital 3D wallet for the poster, leaving one gap as I'm not sure what part of the wallet needs to be explained next.

I also recorded my video of my physical prototype this day and edited over the audio.

06-10-23

Today I worked and completed the poster for my final submission.

I found a lot of difficultly in rendering the final image of the digital 3D wallet, with the money clip just not being processed in any render, to combat this I decided to individually render each wallet and then collage them together to appear as it were a single photo.
